## What is hyperhidrosis?

(Excessive Sweating)

Hyperhidrosis is a medical condition characterized by excessive sweating that affects 4.8%<sup>(1)</sup> of the population. Studies show that hyperhidrosis has severe negative impacts on the quality of life and general wellbeing of those affected.

<sup>1/</sup> Doolittle, James, Patricia Walker, Thomas Mills, and Jane Thurston. "Hyperhidrosis: an update on prevalence and severity in the United States." Archives of dermatological research 308, no. 10 (2016): 743-749.

## How does iontophoresis work?

Dermadry treats excessive sweating by directing a mild current through the skin.

Our treatment sessions are 15-20 minutes and can provide up to 6 weeks of dryness!

## Why choose Dermadry?

Our at-home treatments provide six weeks of comfort, with very limited side effects.

Dermadry is a needle-free and drug-free solution with a success rate of over 90%<sup>(2)</sup>, even in the most severe cases.

<sup>2/</sup> Kim, Do Hun, Tae Han Kim, Seung Ho Lee, and Ai Young Lee. "Treatment of Palmar Hyperhidrosis with Tap Water Iontophoresis: A Randomized, Sham-Controlled, Single-Blind, and Parallel-Designed Clinical Trial." Annals of dermatology; 29, no. 6 (2017): 728-734.

## About Dermadry

Dermadry is an iontophoresis device for the treatment of hyperhidrosis (excessive sweating) of the hands, feet, and underarms. We combine simplicity with the strictest safety standards.

Our device is distinguished by its affordability, intuitive use, and innovative technology.
